

CONTENTS

Chapter 1. MSCE-POP MODEL DESCRIPTION	3
1.1. The structure of MSCE-POP model	3
1.2. The atmospheric compartment	6
1.3. Soil compartment	10
1.4. Vegetation compartment	15
1.5. Seawater compartments	16
1.6. Initial conditions and influence of external sources	19
1.7. Computations of transboundary fluxes	19
1.8. Input data for modelling	19
 Chapter 2. MODEL OUTPUT	 23
2.1. Transboundary transport and country-specific information	24
2.2. Spatial distribution of contamination	28
2.3. Depositions to different types of underlying surface and possible contributions to risk assessment	31
2.4. Long-term trends of contamination	31
2.5. Evaluation of emission reduction scenarios	32
2.6. Redistribution between main environmental media	34
2.7. Long-range transport potential and overall persistence	34
 Chapter 3. SENSITIVITY ANALYSIS OF MSCE-POP MODEL (REGIONAL VERSION)	 39
3.1. Sensitivity of deposition processes with respect to selected parameters and ambient temperature	41
3.2. Sensitivity of model output with respect to selected parameters	53
3.3. Conclusions	59
